

Code-Layout, Readability and Reusability

Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Team ID	SWTID-2026-1254
Team Lead	Kamalesh S
Team Members	Tamilselvan P, Tamilselvam K, Mugunthan S, Suriya L

Modular Design

ComicCraft separates responsibilities into model integration, image generation, layout building, exporting, routing, and frontend templates.

Model Modules

gemini_flash.py contains generate_outline(); gemini_pro.py contains generate_story(); image_generator.py contains generate_image().

Layout and Export Modules

layout_builder.py contains build_comic_layout(); exporters.py contains save_pdf().

Routing

routes.py coordinates form/JSON input, AI generation, preview rendering, image testing, and export confirmation.

Frontend Reusability

Jinja2 templates are separated by functionality: index.html, comic_preview.html, and export_success.html.

Readability

The workflow uses named functions for individual tasks and passes structured panel data between stages.
