

# Coding & Solution

|              |                                                         |
|--------------|---------------------------------------------------------|
| Project Name | ComicCraft - AI Comic Story Creator using Gemini Models |
| Team ID      | SWTID-2026-1254                                         |
| Team Lead    | Kamalesh S                                              |
| Team Members | Tamilselvan P, Tamilselvam K, Mugunthan S, Suriya L     |

## Core Function 1

`generate_outline()` in `gemini_flash.py` uses Gemini Flash to create a structured 5-panel comic outline. Each panel contains panel number, title, scene description, and image generation prompt.

## Core Function 2

`generate_story()` in `gemini_pro.py` expands the outline into detailed comic narration and character dialogues.

## Core Function 3

`generate_image()` in `image_generator.py` uses Stable Diffusion to create comic-style illustrations and saves them to `static/panels`.

## Core Function 4

`build_comic_layout()` in `layout_builder.py` combines panel images with the corresponding story content.

## Core Function 5

`save_pdf()` in `exporters.py` compiles images and narration into a multi-page PDF under `static/exports`.

## Backend Routes

`/`, `/generate`, `/generate-comic/json`, `/export-success`, and `/test-image`.

## Input Handling

`/generate` accepts form fields; `/generate-comic/json` accepts a JSON payload validated by `PromptRequest`.
